INCLUSION SURVEYS FOR MONTICELLO VICINITY PROPERTIES

The U.S. Department of Energy is presently completing investigations to identify potential properties contaminated with uranium mill tailings derived from the Monticello mill site. These investigations will continue throughout the coming year and include vicinity property surveys being conducted by the DOE by its contractor, Oak Ridge National Laboratory.

As part of the investigation, DOE requests anyone who has reasonable cause to believe tailings from the Monticello mill were moved onto their property, or another property that has not yet been assessed by DOE, to provide this information to the Department of Energy.

Please contact either of the following:

UNC Geotech Monticello field office
(801) 587-2615

or

Mr. Dee Williamson
DOE Grand Junction Projects Office
(303) 248-6002
